BlueBox Crack is a small widget that adds a telephone toy on the desktop, simulating the DTMF (Dual-Tone Multi-Frequency) tones used to dial numbers. It can be seamlessly installed and set up, even by novice users. The interface of the app is represented by a very small frame that you can move to any position on the screen, with the help of the mouse cursor. Pressing each key triggers a particular sound. Unfortunately, BlueBox does not come with any configuration settings of its own. For example, you cannot select

---

different colors for the background and buttons of the main frame.

However, we must take into account the fact that the widget has not been updated for a very long time, since the Yahoo! Widget Engine project has been discontinued. But, thanks to the default options provided by the operating system, you can open the context menu to make some modifications. Therefore, you can make the frame stay on top of other windows and set its opacity level to a predefined value, ranging from 20% to 100%. The widget barely uses CPU and system memory, so it shouldn't be

---

a concern to the resources consumption. It has a good response time and works well, without making the operating system hang, crash or pop up error dialogs. Thanks to its overall simplicity, users with little or no experience in software apps can rapidly get adjusted to BlueBox. Script is a text editor that, like its name suggests, is available for the Linux platform. It is easy to use and has a clean interface, although it lacks specific functions of other text editors, such as instant scrolling, pasting to clipboard, and the ability to navigate with arrow keys. For this reason, it is not suitable for complicated tasks, like editing complex HTML code. You will be very comfortable with the application if you have used text editors before. The text editor has an interface that is similar to that of many modern graphical text editors, such as Notepad++, Gedit, or Leafpad. You

can easily access commands, navigate with the keyboard, search for specific words or sentences in the current document, or add comments. The general settings of the text editor can be modified from within its interface. You can also use an online database to manage and filter a list of words that are frequently used. For example, if you create a list of useful words, you can highlight them as you type and, by pressing the Enter key, they will be automatically inserted in the document. You can insert several files, folders or images into the text editor, for a more complex scenario. You can

also use custom shortcuts to change its behavior. [+] Free Luna Script is a text editor that, like its name suggests, is available for the Linux platform.

This invention relates to the field of sterilization and disinfection of medicinal drugs and other medical supplies, and more particularly to a method and apparatus for decontaminating a fluid such as a medicinal solution. The prior art does not disclose a method or apparatus for sterilizing or disinfecting a fluid, particularly a medicinal solution, in such a way as to avoid contamination by the solution or require a

---

recontamination step before the fluid can be reused. In U.S. Pat. No. 5,551,487, for example, the inventor teaches a method and apparatus for preparing a drug product which is substantially free of degradation of the active pharmaceutical ingredient(s) and substantially free of chemical and microbiological contaminants. The inventor achieves this goal by exposing the active pharmaceutical ingredient(s) to a combined gas-vapor phase, preferably an acid-gas phase, and ultraviolet light in an integrated device. The gas-vapor phase and ultraviolet light react together to sterilize the

---

active pharmaceutical ingredient(s). The inventor then heats the sterilized active pharmaceutical ingredient(s) to a temperature substantially above the melting point of the active pharmaceutical ingredient(s) in order to extract the active pharmaceutical ingredient(s) from any remaining insoluble impurities. Thereafter, the active pharmaceutical ingredient(s) is cooled to a temperature between about 22xc2x0 C. to about 45xc2x0 C. whereupon the active pharmaceutical ingredient(s) solidifies in a form suitable for its intended use.
