When you are in the tools menu you will notice an "Advanced Mode" toggle along with the Batch, Motion, and Sketch tools. While it won't change the appearance or functionality of the tools, it will change what options are available from the quick access menu. I believe that the desire to work with multiple images at once could be accomplished in a far easier way through the use of a virtual canvas. For example, to quickly edit the reds, blues, and the greens in a particular image, you only need to paint a color on the canvas. Once you apply the negative action, the brush will change itself to work on the new pattern and the canvas will change to that color. You can also add the same brush and color to the next image and the process will occur. For example, say I have two individual portraits. I start with doing a cross-eyed adjustment to the left eye of one of the images and adjust colors using an eyedropper then adjusting the color with the gradient tool. Once I am satisfied, I do the same thing to the other portrait, and then I color correct (curves) and make adjustments to the right eye. Unfortunately, this advanced tool won't be coming to Adobe Photoshop, and it doesn't need to. The more advanced interface features can probably best be done in Photoshop Express. If you look at the links or use the Adobe Creative Cloud mobile app, you'll get access to all the features that are in Photoshop. Corel PaintShop Pro, for example, has many of the features built in.

While each filter steps up the contrast of the image, Photoshop has simplified that step and now decreases black until you hit the first black pixel in the image.
